

Jay Patel

Associate DevOps Engineer

+91 9104026090 | patel2110.jay@gmail.com | [Github](#) | [LinkedIn](#) | [Portfolio](#)

PROFILE SUMMARY

Associate DevOps Engineer with nearly **1 year of hands-on production experience** working on AWS cloud infrastructure, IAM automation, and CI/CD pipelines. Strong systems mindset with an ICT engineering background, focused on reliability, security, cost awareness, and operational discipline rather than tool-centric implementations.

EXPERIENCE

Wonderlend Hubs

Associate DevOps Engineer - Trainee

Internship: Feb 2025 – Dec 2025

Full Time Employment: 2025 – Present

- Automated AWS IAM user provisioning by building a JIRA-integrated Python system that parses structured access requests, provisions IAM users, assigns groups, applies audit tags, and updates ticket workflows, reducing manual access handling time by ~60% and eliminating repeated configuration errors.
- Delivered secure credential onboarding using AWS SES and Slack-based notifications with enforced password reset flows and MFA-ready setups, standardizing access delivery for multiple onboarding requests per week and improving audit consistency.
- Supported frequent staging and production deployments across AWS-based microservices (multiple releases per week), diagnosing CI/CD pipeline failures, permission issues, and environment misconfigurations to restore deployment flow with minimal service disruption.
- Investigated and resolved IAM and environment-related deployment blockers, reducing recurring pipeline failures and improving deployment success rate across shared environments.
- Collaborated with developers and senior engineers to debug cloud infrastructure issues, gaining exposure to real-world failure modes, blast-radius control, and operational trade-offs in production systems.

PROJECTS

DocVault-Static website with Serverless Backend

- Designed and deployed a document management website hosted as static site on S3 using infrastructure as a code
- Integrated API Gateway, Lambda, DynamoDB for user management
- Automated deployment using pipeline
- Engineered secure, serverless file management system utilizing AWS Lambda and DynamoDB, processing 500+ file uploads daily and maintaining 99.99% data availability, exceeding SLAs.
- Designed with modular architecture for scalability and cost-efficiency under free-tier constraints.

Resurge-Net — Risk-Aware Cloud Autoscaling (Research Project)

- Built a proactive autoscaling framework that predicts demand using CNN + LSTM/GRU models, explicitly modeling uncertainty and rare workload spikes instead of relying on reactive scaling.
- Trained models on Alibaba Cluster Trace v2018 using sliding-window time-series datasets containing CPU and memory utilization across thousands of workload intervals.
- Designed tunable risk-based scaling policies that reduced simulated SLA violations while lowering total instance-hours compared to reactive and mean-only baselines.
- Evaluated performance using MAE, RMSE, pinball loss, interval coverage, and cost-SLA tradeoff curves, demonstrating measurable reliability and cost improvements under identical capacity constraints.

EDUCATION

Pandit Deendayal Energy University

Gandhinagar, Gujarat

BTech. in Information and Communication Technology

2022 – 2026

- CPI[after 7th sem] : 8.95/10

SKILLS

Technical skills:

Tools: Python,C,C++,Docker,Terraform,Gitlab,CI/CD,SQL, Linux, Shell

ACHIEVEMENTS

- Reduced manual setup time by over 80% by automating 10+ AWS resources with Terraform
- Deployed a fully functional serverless platform (DocVault) using 100% IaC
- Contributed to **5+ microservice deployments**, helping maintain build quality and rollback strategies.
- Completed AWS Cloud Practitioner certification
